

Md. Jakir Hosen

DevOps Engineer

✉ jakirhosen.tech@gmail.com — ☎ +8801521737413 —  LinkedIn —  jakirhosen9395 — 📍 Mohakhali

PROFILE

DevOps Engineer building and operating containerized microservice platforms on **AWS** — **Docker, Kubernetes, CI/CD** (GitLab, Jenkins), **Terraform**, and **Ansible**. Progressed from Intern to Junior DevOps Engineer at TechnoNext, now a full-time DevOps Engineer at Firsttrip, both under **US-Bangla Group**.

SKILLS

Virtualization Tools:	ESXi, ProxMox, VMWare, Vagrant, VirtualBox, KVM, Linux
Containerization & Orchestration:	Docker , Docker Compose, Kubernetes , ArgoCD
CI/CD & DevSecOps:	GitLab CI/CD , Jenkins, SonarQube, Trivy, Alerts
Cloud Infrastructure (AWS):	EC2 , S3, RDS, VPC, ALB, Route 53, Auto Scaling, CloudFront
Databases & Messaging:	PostgreSQL, MySQL, MongoDB, Redis, Kafka, MinIO / S3, Harbor
Monitoring & Observability:	Wazuh , Elastic APM , Kibana, Prometheus, Grafana
Version Control & Platform:	Git, GitHub, GitLab
Scripting & Automation:	Bash, YAML, JSON
Infrastructure as Code (IaC):	Terraform, Ansible

EXPERIENCE

DevOps Engineer — Firsttrip Ltd. (US-Bangla Group) Apr 2026 – Present

Infrastructure Reliability:	Maintain production systems for high availability and reliability.
Zero-Downtime Deployment:	Ship releases and infra changes with minimal disruption.
Incident Response:	Monitor systems, resolve incidents, and troubleshoot production issues.
Release Management:	Streamline release processes in collaboration with dev teams.
AWS Provisioning:	Manage EC2, VPC, ALB, RDS, and Auto Scaling infrastructure.
Container Orchestration:	Run services with Docker & Kubernetes for scalable workloads.
DevSecOps:	Embed Trivy and SonarQube scans into CI/CD for secure, quality releases.
Observability:	Run monitoring via Elastic APM, Kibana, and Discord alerts for fast response.
Escalation Ownership:	Serve as point of contact for cross-team infra and deployment issues.

Junior DevOps Engineer — TechnoNext Software Ltd. (US-Bangla Group) Oct 2025 – Apr 2026

Environment Support:	Supported dev/staging environments for reliable app delivery.
Infrastructure Provisioning:	Set up infrastructure for deployment and testing.
CI/CD Pipelines:	Built GitLab CI/CD pipelines to automate builds and deployments.
Deployment Monitoring:	Monitored and optimized deployments across environments.
Daily Operations:	Worked with Linux, Docker, Kubernetes, and AWS day to day.
AWS Configuration:	Configured EC2, S3, RDS, and VPC for dev/staging workloads.
Automation:	Wrote Ansible playbooks & Terraform configs to automate provisioning.
Containerized Deployments:	Supported Docker Compose & Kubernetes across environments.
Monitoring Setup:	Implemented basic monitoring/alerting for infra visibility.
Documentation:	Documented deployment steps for team knowledge-sharing.

Linux Fundamentals:	Learned server administration — filesystem structure, user management, and shell scripting.
Docker Basics:	Built and ran containerized applications using Docker and Docker Compose.
CI/CD Exposure:	Assisted in configuring and testing GitLab CI/CD pipeline stages.
Version Control:	Practiced Git workflows for branching, merging, and collaborative development.
Cloud Familiarization:	Gained hands-on exposure to core AWS services (EC2, S3) under mentor guidance.
Documentation:	Wrote setup notes and internal guides to support onboarding of future interns.

KEY PROJECTS

End-to-End DevOps for a Microservices Application

AWS Infrastructure:	Provisioned EC2, VPC, ALB, Route 53, and Auto Scaling.
CI/CD Pipeline:	Built GitLab CI/CD pipelines — build, test, scan, deploy — for fast, reliable releases.
Containerization:	Optimized multi-stage Docker images; orchestrated via Docker Compose & Kubernetes.
Observability:	Implemented monitoring with Elastic APM & Kibana for proactive visibility.
Documentation:	Authored deployment docs and runbooks for onboarding and incident response.
Production Support:	Delivered ongoing production/staging support to maintain uptime.

Technical Highlights

AWS Infrastructure:	Managed EC2, VPC, ALB, Route 53, Auto Scaling, RDS, S3, CloudFront.
CI/CD Pipeline:	Built pipelines (GitLab, Jenkins) with SonarQube & Trivy integration.
Containerization:	Deployed apps with Docker; orchestrated on Kubernetes.
Monitoring:	Built dashboards using Elastic APM & Kibana for real-time incident tracking.
Documentation:	Produced deployment docs and runbooks for team-wide consistency.
Support:	Delivered hands-on production/staging support end to end.

GitHub Documentation

<i>linux-tricks:</i>	Linux admin guides — disk mounting, KVM/Vagrant/libvirt setup, SSH & GitHub config.
<i>gitlab-pipeline:</i>	Centralized GitLab CI/CD router preventing conflicts across dev/stage/prod.
<i>kubernetes:</i>	Manifests and configs for containerized workload deployment.
<i>elastic-apm-stack:</i>	Elasticsearch + Kibana + APM setup with bounded storage & Discord alerts.
<i>utilities-setup on Docker:</i>	Setup guides for APM, Kafka, MongoDB, Redis, and more.

COMPETITIVE PROGRAMMING & COMMUNITY

Codeforces Pupil (Rating: 1199) — 450+ problems solved; **2nd place**, ISU Programming Contest 2022.
Volunteer, **Cloud Native Days Bangladesh 2026**; ACM ICPC participant; active on LeetCode, Codeforces, AtCoder.

CERTIFICATIONS

– *DevOps Beginners to Advanced (Udemy)* — AWS, Linux, Jenkins, Ansible, Docker, Kubernetes, Terraform.

EDUCATION

BSc in Computer Science & Engineering
2021 – 2025 — GPA: 3.55

International Standard University
